Yuriko Star | card_skills | [SR6 Core Rulebook, p. 92]

Karma: 15	Quality Type: positive
Max Rating: 1	Source: hack_slash

Natural Hacker

You use your innate connection to the Resonance to get things done in the Matrix. It's all you need.

- **Cost:** 15 Karma

- **Game Effect:** Whenever you take a Matrix action or a defense test against a Matrix action, complex form, or sprite power, you may choose to use your Resonance attribute in place of any other non-Matrix attribute used on that test. You may not replace Attack, Sleaze, Data Processing, or Firewall with Resonance using this quality.

Karma: 20**Quality Type:** positive**Max Rating:** 1**Source:** hack_slash

Technoshamans

Technoshamans integrate the spiritual with their abilities. They are experts on sprites, phenomenal at interacting with Resonance creatures, and many even show a penchant for dealing with technocritters.

Yuriko Star | technoshaman | [Hack and Slash, Page 1]

Karma: 6**Quality Type:** positive**Max Rating:** 1**Source:** hack_slash

Designer

- **Cost:** 6 Karma

Some AIs are experts at restructuring firmware to achieve maximum hardware efficiency. Their self-designed home device (see **Restoration and Realignment**, p. 124) grants them an additional +1 modifier to the Data Processing or Pilot attribute and 2 points of noise reduction.

Yuriko Star | designer | [Hack and Slash, Page 1]

SENSOR UPGRADE

QUALITY

Karma: 5

Quality Type: positive

Max Rating: 1

Source: hack_slash

Sensor Upgrade

- **Cost:** 5 Karma

The AI is an expert at tweaking the sensor settings of devices linked to it. The AI adds a +1 to the Sensor rating of any vehicle, drone, or device that is linked to its icon. All functions of a single sensor array gain this bonus, if applicable. This bonus also applies to any device the AI is currently running on.

Yuriko Star | sensor_upgrade | [Hack and Slash, Page 1]

Karma: 8**Quality Type:** positive**Max Rating:** 3**Source:** hack_slash

Pilot Origins

- **Cost:** 8 Karma per Level (max 3)

An AI with this quality likely evolved from a drone pilot program and retained its abilities. The AI may jump into drones and vehicles, controlling them like a rigger. Each level of this quality grants the bonus of a control rig of an equal rating. The AI is also capable of loading, converting, and using drone autosofts equal to its Data Processing (AI-driven drones use the attributes, skills, and Matrix Initiative of the AI). As a side note, this is piloting by pure calculation and data processing; it does not include the simsense processing ability of the Control Rig Integration codemod. The two methods are incompatible and do not stack with each other or with any Resonant echoes.

Karma: 7**Quality Type:** negative**Max Rating:** 1**Source:** hack_slash

Buddy System

You don't feel safe enough to concentrate clearly without someone to watch your back.

- **Bonus:** 7 Karma

- **Game Effect:** Whenever you are alone, you may only gain a maximum of one Edge per combat round. If you are in astral space, only astrally active allies are considered company for the purpose of this quality, but a summoned spirit is all you need to prevent the penalty. If you are in VR mode, only allies in the Matrix with you make you feel less alone, but having an agent program or sprite nearby, or even a SimShare hitchhiker, is enough to prevent the penalty.

Karma: 12	Quality Type: negative
Max Rating: 1	Source: core
Choice: Primal Sprite	

Spirit/Sprite Bane

You may have angered them with how you treat their fellows, killed a powerful and respected member of their kind, or been born under a bad sign and marked as an enemy to entities like them. The reason doesn't matter—what matters is the fact that a certain type of spirit/sprite has an inherent dislike for you.

- **Bonus:** 12 Karma

- **Game Effect:** When selecting this quality, choose a type of spirit or sprite. Spirits/ sprites from that category gain a bonus point of Edge when you attempt a Conjuring or Tasking test against them. This quality can be taken multiple times, selecting a new class of spirits/sprites each time.

In combat, spirits/sprites of the chosen type will attack you first and relentlessly, often to the point of savaging a dead body or bricking a deck if they have nothing else to do.

Karma: 5	Quality Type: negative
Max Rating: 3	Source: companion
Rating: 2	

Hooder

You're driven to do what you can to help others.

- **Bonus:** 5 Karma/level (max level 3)

- **Game Effect:** You must donate at least 1,000 nuyen per level of this quality every month. The donation cannot go to other members

Someone wants you dead, and they have the means to get it done.

- **Bonus:** 5 Karma per level (max level 5)

- **Game Effect:** Whenever your personal Heat is 15 or higher, assassins catch up to you. You always seem to manage a narrow escape, but you never get away unscathed. At the beginning of every session (after your Edge pool refreshes), roll Body to resist 7P damage, with +1 DV per level of this quality. You may treat this wound using any available short-term healing (first aid, medkit, heal spell, etc.), but you may not take advantage of any long-term healing before the session begins.

CLEANER

COMPLEX_FORM

Fade: 2	Duration: Permanent
Target: Device	Source: core
Fading: 2	

Cleaner targets a device and makes an Electronics + Resonance vs. 2 x device rating (or Firewall) test. Each net hit reduces the target's Overwatch Score (OS) by 1. If used on a living persona or persona on a commlink, it directly decreases the accumulated OS from illicit matrix actions.

Yuriko Star | cleaner | [SR6 Core Rulebook, p. 192]

Fade: 2	Duration: Sustained
Target: Firewall	Source: core
Fading: 4	

Diffusion (Matrix Attribute)

==> picture [152 x 20] intentionally omitted \<==

Make an Electronics + Resonance vs Willpower + Firewall opposed test. Each net hit reduces (attribute) by 1, to a minimum of 1. Can be purchased multiple times, with each time targeting a different attribute.

Fade: 2	Duration: Permanent
Target: Device	Source: hack_slash
Fading: -1	

Technoregeneration

Yuriko Star | technoregeneration | [Hack and Slash, Page 1]

Puppeteer

==> picture [153 x 20] intentionally omitted \<==

You may take the Control Device action on a device even if you do not have the proper access level. You must still be able to detect the device.

Yuriko Star | puppeteer | [Berlin Edition, Page 12]

Fade: 2	Duration: Immediate
Target: Device, Persona	Source: hack_slash
Fading: 3	

Cyber Spike

Yuriko Star | cyber_spike | [Hack and Slash, Page 1]

Hybrid Sprites: When you compile a sprite, you can allocate net hits toward using this echo (instead of using those net hits to add more services). For each net hit you allocate in this way, you may provide the sprite with a skill or power that is normally only available to a different type of sprite that you know how to compile.

Yuriko Star | [echo_hybrid_sprites](#) | [Hack and Slash, p. 70]

New Sprite Type: You gain the ability to compile and register Assassin, Defender, Modular, and Primal sprites (see **New Sprite Types** , p. 72).

Yuriko Star | echo_new_sprite_type | [Hack and Slash, p. 70]

Sprite Conduit: You are able to form deep bonds with sprites, and through these bonds you help register them into a more permanent form. You may permanently register sprites with great expenditures of time and Karma. When you do so, you may create either a free sprite or an ally sprite. The rules for this are in the following chapter, **Points of Sprite** (p. 72). Add your submersion grade in bonus dice to your dice pool on all fading resistance tests from compiling and registering sprites.

Yuriko Star | echo_sprite_conduit | [Hack and Slash, p. 70]

Sprite Symbiosis: You must have the Sprite Conduit echo in order to take this echo. You may merge your ally sprite into your persona in order to boost your own power. See **Points of Sprite** , p. 79, for the full rules on this.

Yuriko Star | echo_sprite_symbiosis | [Hack and Slash, p. 70]

Living Network: Your living persona can participate in a PAN. This Echo is only selected once.

Yuriko Star | [echo_living_network](#) | [SR6 Core Rulebook, p. 195]

Transcendent Network: You must have the Living Network echo in order to take this echo. When your living persona functions as the master device in a network, you act as an advanced conduit for data traveling through you, able to parse and process data at a supermetahuman rate. This allows anyone connected to your network to benefit from information sharing similar to the effect of an M-TOC device. In order to benefit from this echo, each person must connect their commlink (or other persona-generating device) to your living network. All connected individuals have access to a special pool of Edge that is equal to your submersion grade. This Edge pool is empty when established, but any connected character can transfer their Edge to it on a one-for-one basis at any time. When a point of Edge is earned by a connected character, it may be transferred to the transcendent network without counting against the maximum Edge that can be earned each round. Edge from the transcendent network may be used on any Edge boost or action that benefits any character that is connected. If you also have an M-TOC system, you can make full use of it along with the benefits of the transcendent network. They do not clash with one another. Another benefit of this echo is that connected characters who use the Send Message action (a Minor Action) among themselves gain a bonus Minor Action immediately afterward. This often gives users the impression that they have a telepathic link.

Yuriko Star | [echo_transcendent_network](#) | [Hack and Slash, p. 70]

Overclocking: You accelerate your living persona to act more quickly in the Matrix. You get an additional Minor Action and +1D6 Initiative Dice while you're in hot-sim VR.

Yuriko Star | echo_overclocking | [SR6 Core Rulebook, p. 195]

Software Emulator: You must have Living Network in order to take this echo. You are capable of running commlink apps, cyberprograms, and autosofts on your living persona. You have

(Resonance/2) program slots. The maximum rating for any program you are capable of running is 6, and you are incapable of running an agent on your Living Network. Before you can emulate a program, you need to acquire a copy of it to absorb. Absorbing a program consumes it, causing its complete deletion. This takes an extended Electronics (Software) test with a threshold of 4 or the program's rating, whichever is higher (or applicable), and an interval of one hour. If the test fails, you can try again. A glitch adds 2 to the threshold, and a critical glitch causes both failure and deletion of the program. If you succeed, you may spend 1 Karma to absorb the code into yourself. After that, you can run it whenever you like. It can be crashed, but you can always reload it with a Minor Action. These programs can never be permanently deleted from your mind. There is no limit to how many programs you can “learn” in this way.

Sprite Link: Your mind is more closely linked to your sprites, which allows them to more clearly understand your commands. When you spend a task and a Minor Action to command a sprite to assist you in a Teamwork test using one of its skills, you gain a bonus Minor Action. With a Minor Anytime Action and the use of one task, you may transfer fading damage that you would suffer to one of your sprites. You may attempt to resist fading first, then transfer as many boxes of unresisted damage as you choose. Your Sprite Rep goes down by 1 every time you do this.

rEvolution Arms Crimson Wasp

For years, the laser market has been a very narrow field, with research and manufacturing cost keeping most other arms companies out of the game. Even those that reverse-engineered someone else's design still had a hard time getting a budget to build them for the limited market. This weapon offers competition and innovation on the current market leader, along with a strong market in the ever-growing space operations field, which is Evo's primary reason for focusing on this weapon.

A familiar design and operation style make this laser ideal for classically trained soldiers. The battery pack changes out just like a removable magazine, the ergonomics of the gun remind the user of its minimal recoil, and the sighting system aligns with the "barrel" in order to increase accuracy. Like most laser weapons, they have fantastic accuracy at range but lose beam focus, and thus damage, over distance. But since modern armor is not designed for heat and radiation energy dissipation, the trade-off is often worth it.

==> picture [228 x 80] intentionally omitted \<==

- While rEvolution is starting with the "Crimson" and "Red" names, they already have designs that use a different wavelength to alter color.

- Plan 9

Modifications: Smartlink, Drone Mount (+2 AR), Link-Fired (2x Wasps)

rEVolution Arms Red Fox

I was impressed with the Wasp, but I am in love with the Fox. The extended barrel adds beam focusing that pushes the effective range past any other laser on the market. It still suffers from particulate disruption over distance, but rEVolution did something in the design to mitigate that. The look and feel are also awesome, with the same battery exchange style to give it a more classic rifle feel and a sharp design to fit its futuristic operation.

- I watched a misfire once—the gun melted. They're built tough, but a hard jostle could put the emitters out of alignment, causing a myriad of issues, the worst of which is a catastrophic meltdown.

- Stone

- Actually, the worst is a catastrophic battery overload. Goes off like a grenade. Small damage radius, but enough to trash the gun, your hands, and your head if held at the shoulder.

- Picador

- Hip firing it is!

- Stone
- Really?! Think about that.
- Picador

Modifications: MAA Cyberarm Mount (+2 AR)

Tesla Coil

After Ares introduced the Scylla, it didn't take long for other weapons manufacturers to reverse-engineer their marvel of directed lightning. Although the term "tesla coil" isn't strictly accurate, it's stuck as a brand-agnostic description of the cyber implant version of this weapon. A tesla coil projects electrical energy in a spray attack, much like a flamethrower. They prodigiously consume energy and require battery packs; the user's natural bioelectrical current is nowhere near sufficient to power this weapon. A tesla coil is not designed to moderate its consumption of battery charges. Once a battery is drained by a tesla coil, it cannot be recharged.

MONOFILAMENT WHIP

WEAPON

Category: Melee	Damage: 6P
Ap: 0	Attack Rating: 14/-/-/-
Modes: -	Ammo: -
Cost: 0	Avail: 6I

Modifications: Fingertip Cyberarm Mount (+2 AR), Wireless ON (+2 AR)

Monofilament Whip

Striking fear in the hearts of those who have warily watched its serpentine glow since the 2050s. In the hands of a trained user, this terrifying weapon can cut through armor, flesh, and bone as easy as butter with every millimeter of its two meters of monofilament line. In the wrong hands, or even with a bad twist of a skilled wrist, that line can send you to the street doc looking for a new limb. The whip is stored in the specially designed compartment in the handle with a small weight that detaches when the weapon is activated. Glitches are handled as usual, but a critical glitch always requires the wielder to resist the base damage of the weapon.

DAGGER OF THE SACRED ROSE (+1 WEAPON FOCUS)

WEAPON

Damage: 2P

Attack Rating: 9/1/-/-

Task Force Dagger

Representing the Twenty-First Independent Ranger Division, members of Task Force Dagger (like the Twenty-First in general) are composed of the remnants of multiple mercenary commands, primarily the Sixty-First and Seventy-Seventh Independent Rangers. Pulling from such a varied pool has allowed the Task Force Dagger to create a versatile roster that includes Matrix, magic, vehicles, and logistic support. As the Twenty-First didn't form until late 2083, the coming season will mark their first appearance in Desert Wars. Scuttlebutt indicates the Twenty-First sees the Desert Wars as an opportunity to assist with training, creating good publicity, and increase further recruitment.

- Interesting. I thought you were more affiliated with a certain ... foundation.

Shiawase Bi-Drone Butler

(medium anthro drone)

The idea of robots and androids being servants to help make life easier for the everyday person has been a popular trope in science-fiction for well over a century now. Early attempts at such robotic servants were not only extremely clunky and primitive, but also extremely limited in their functionality. With the advent of state-of-the-art software, autosofts, and VR/AR controls, however, Shiawase has developed a series of anthroform drones that allow the average person to have that robotic servant they've always wanted. Known as the Butler, this medium-sized anthrodrone has special software that allows it to perform a wide variety of simple tasks. And like any other drone, it can be remotely operated. Also like any drone, the Butler is not a thinking machine. It only performs tasks it has been ordered to do, and once they are complete, the Butler will simply wait until another

- Slamm-0!

- A servant for everyone? Not at that prize. This is just another rich person's toy.

- Old Crow

- I got one, named Jimmy III. I don't use him as a butler, but he makes a great assistant in my garage holding and retrieving tools, making light repairs, that sort of thing. And I wouldn't say he's got zero combat ability. Like his forbearers, Jimmy I and II, he has a claymore mine strapped to his chest. Jimmy I and II helped me stay one step ahead of a roach that got into my place.

- Johnny Redline

- I've also heard that Shiawase is trying to court Als, and they made these drones with the specific intent of being inhabited.

- > Clockwork

- Hey, stay in your lane! Batdrek theories are my department!

Shiawase Bi-Drone Man-At-Arms

(medium anthro drone)

Based on the Butler chassis and frame, the Man-at-Arms is the security/combat version. Approximately the size of an average human (1.4 meters), the Man-at-Arms is a more traditional drone. The outer shell is completely customizable and can be tailored to the user's needs or whatever aesthetic they choose. Underneath the shell, the Man-at-Arms has a reinforced endo-frame and armored Kevlar plates around key systems and joints, although additional armor can be added. Special piloting software allows the drone to move (more or less) like a standard metahuman; for example, the ability to stand after being knocked down. While the Man-at-Arms has fine manipulation hands, these hands are inadequate for holding, much less employing, weapons. The right arm features a hardpoint that can mount up to an LMG-sized weapon. While a decent weapons platform, the Man-at-Arms is still limited in both its mobility

and strength. Its strength is on par with an average metahuman, and its top speed is the same as a brisk walk.

- Why do corps keep trying to make robot solders? I'm not a rigger, and I know that you get more out of a combat drone when it's modeled after a vehicle of some kind. This is a bloody waste of good nuyen.

- Chainmaker

- As a frontline combat unit, I agree. However, as a garrison or security unit, they have their uses. My unit uses anthro-form drones as part of the first line of security and defense at all of our bases. Yeah, they tend to go down quickly, but they still have to be dealt with. This gives us a buffer and the heavy-hitters time to mobilize and react.

- Picador

- Oh, and I'll do you one better. Imagine a bunch of these under the direct control of a security spider at a corp facility coming at you in waves before the real pain starts. I still have nightmares.

faces in situations or conditions where employing other wheeled or flying drones (along with metahuman rescuers) is not feasible. The Silverback's main limbs feature magneto-hydraulics that give it great lifting ability but are strong enough to tear or rend open most standard vehicles and even some reinforced doors. These arms can also mount a wide variety of cutting tools to assist in such rescue operations. The secondary legs also feature fully functional hands with enhanced tactile sensors and are used when fine manual dexterity tasks are required. To assist with its rescue profile, the Silverback can also carry a detachable emergency rescue litter on its back and has compartments in its abdomen for emergency supplies. Because it's often sent into hazardous

environments where a fall from great heights is probable, the Silverback is extremely rugged with a semi-flexible frame featuring reinforced segments to absorb and dissipate damage. Additionally, all internal systems have multiple redundancies to help ensure continued functionality.

- Mika

- So **that's** what happened to you in Miami.

- Ma'Fan
