Yuriko Star | card_skills | [SR6 Core Rulebook, p. 92]

Karma: 15**Quality Type:** positive**Max Rating:** 1**Source:** hack_slash

Natural Hacker

You use your innate connection to the Resonance to get things done in the Matrix. It's all you need.

- Cost: 15 Karma
- Game Effect: Whenever you take a Matrix action or a defense test against a Matrix action, complex form, or sprite power, you may choose to use your Resonance attribute in place of any other non-Matrix attribute used on that test. You may not replace Attack, Sleaze, Data Processing, or Firewall with Resonance using this quality.

Karma: 20**Quality Type:** positive**Max Rating:** 1**Source:** hack_slash

Technoshamans

Technoshamans integrate the spiritual with their abilities. They are experts on sprites, phenomenal at interacting with Resonance creatures, and many even show a penchant for dealing with technocritters.

Yuriko Star | technoshaman | [Hack and Slash, Page 4]

Karma: 6**Quality Type:** positive**Max Rating:** 1**Source:** hack_slash

Designer

- Cost: 6 Karma

Some AIs are experts at restructuring firmware to achieve maximum hardware efficiency. Their self-designed home device (see Restoration and Realignment , p. 124) grants them an additional +1 modifier to the Data Processing or Pilot attribute and 2 points of noise reduction.

SENSOR UPGRADE

QUALITY

Karma: 5

Quality Type: positive

Max Rating: 1

Source: hack_slash

Sensor Upgrade

- Cost: 5 Karma

The AI is an expert at tweaking the sensor settings of devices linked to it. The AI adds a +1 to the Sensor rating of any vehicle, drone, or device that is linked to its icon. All functions of a single sensor array gain this bonus, if applicable. This bonus also applies to any device the AI is currently running on.

Yuriko Star | sensor_upgrade | [Hack and Slash, Page 4]

Karma: 8**Quality Type:** positive**Max Rating:** 3**Source:** hack_slash

Pilot Origins

- Cost: 8 Karma per Level (max 3)

An AI with this quality likely evolved from a drone pilot program and retained its abilities. The AI may jump into drones and vehicles, controlling them like a rigger. Each level of this quality grants the bonus of a control rig of an equal rating. The AI is also capable of loading, converting, and using drone autosofts equal to its Data Processing (AI-driven drones use the attributes, skills, and Matrix Initiative of the AI). As a side note, this is piloting by pure calculation and data processing; it does not include the simsense processing ability of the Control Rig Integration codemod. The two methods are incompatible and do not stack with each other or with any Resonant echoes.

Karma: 7**Quality Type:** negative**Max Rating:** 1**Source:** hack_slash

Buddy System

You don't feel safe enough to concentrate clearly without someone to watch your back.

- Bonus: 7 Karma

- Game Effect: Whenever you are alone, you may only gain a maximum of one Edge per combat round. If you are in astral space, only astrally active allies are considered company for the purpose of this quality, but a summoned spirit is all you need to prevent the penalty. If you are in VR mode, only allies in the Matrix with you make you feel less alone, but having an agent program or sprite nearby, or even a SimShare hitchhiker, is enough to prevent the penalty.

SPRITE BANE

QUALITY

Karma: 12	Quality Type: negative
Max Rating: 1	Source: core
Choice: Primal Sprite	

Spirit/Sprite Bane

You may have angered them with how you treat their fellows, killed a powerful and respected member of their kind, or been born under a bad sign and marked as an enemy to entities like them. The reason doesn't matter-what matters is the fact that a certain type of spirit/sprite has an inherent dislike for you.

- Bonus: 12 Karma
- Game Effect: When selecting this quality, choose a type of spirit or sprite. Spirits/ sprites from that category gain a bonus point of Edge when you attempt a Conjuring or Tasking test against them. This quality can be taken multiple times, selecting a new class of spirits/sprites each time.

In combat, spirits/sprites of the chosen type will attack you first and relentlessly, often to the point of savaging a dead body or bricking a deck if they have nothing else to do.

Karma: 5	Quality Type: negative
Max Rating: 3	Source: companion
Rating: 2	

Hooder

You're driven to do what you can to help others.

- Bonus: 5 Karma/level (max level 3)
- Game Effect: You must donate at least 1,000 nuyen per level of this quality every month. The donation cannot go to other members

of your team or family members. You may use this nuyen to purchase favors from your contacts or to Work for the People. If you fail to keep up with this, you feel anxious or guilty. Your opposition gains a point of situational Edge on any opposed rolls against you. The unpaid nuyen maxes out at 1,000 nuyen per level and does not accumulate every missed month.

CLEANER

COMPLEX_FORM

Fade: 2	Duration: Permanent
Target: Device	Source: core
Fading: 2	

Cleaner targets a device and makes an Electronics + Resonance vs. 2 x device rating (or Firewall) test. Each net hit reduces the target's Overwatch Score (OS) by 1. If used on a living persona or persona on a commlink, it directly decreases the accumulated OS from illicit matrix actions.

Yuriko Star | cleaner | [SR6 Core Rulebook, p. 192]

DIFFUSION

COMPLEX_FORM

Fade: 2	Duration: Sustained
Target: Firewall	Source: core
Fading: 4	

Dissonance Diffusion

You've gained a unique talent with using your diffusion complex form.

- Cost: 5 Karma
- Game Effect: You must have the Dissonant Technomancer quality and know the diffusion (any Matrix attribute) complex form to take this quality. When you use diffusion against a target, you may affect multiple Matrix attributes. At least one of your net hits must be applied to the Matrix attribute that your version of diffusion is designed to affect, but additional net hits may reduce whichever Matrix attribute you choose. Each net hit reduces a Matrix attribute by one for as long as the complex form is sustained.

Fade: 2	Duration: Permanent
Target: Device	Source: hack_slash
Fading: -1	

Technoregeneration

Fade Value	Duration
Hits	P

This complex form is the equivalent of a Heal spell for electronic devices. Target a device and make an Electronics (Hardware) + Resonance test. For every hit scored, restore one box of Matrix damage. This only works on devices, not IC, sprites, or other Matrix fauna. When a device has been repaired by this complex form, it tends to function erratically. When making any test using the device, replace one of the dice with a wild die until more thorough maintenance can be done (this requires one hour with an Electronics toolkit). Until this maintenance is done, the device cannot be repaired via technoregeneration again.

Fade: 2	Duration: Sustained
Target: Device	Source: core
Fading: 5	

Puppeteer

You may take the Control Device action on a device even if you do not have the proper access level. You must still be able to detect the device.

Fade: 2	Duration: Immediate
Target: Device, Persona	Source: hack_slash
Fading: 3	

Cyber Spike

Fade Value	Duration
Hits	I

This complex form is the cyberware enthusiast's worst nightmare. While it doesn't truly cause the target's body to reject installed augmentations, it sure makes it feel like that's what's happening and it can be just as fatal. Target a character who has at least one cyberware augmentation that has wireless mode enabled or establish a direct connection to a target who has 'ware that isn't running wireless. If you attempt to use this on a target who doesn't have any vulnerable cyberware, your action is wasted. The more augmentations a target has, the more vulnerable they are. Make an Electronics + Resonance test vs. the target's Body + Essence (rounded down). The target suffers one box of Physical damage for every net hit against them (they may make a Body roll to reduce damage), and all of their cyberware becomes stressed as if from augmentation overdrive (p. 282, SR6) for one combat round.

New Echoes

Aura Link: You must have Skinlink in order to take this echo. You can wirelessly connect to devices as if using a direct connection, but only within a limited range. The range of your Aura Link is a radius from your physical body equal to your submersion grade in meters.

Cyberadept: You have begun to learn that your augmentations can be affected by your connection to the Resonance. Taking this echo unlocks the cyberadept quality path (p. 86).

Data Structure Encoding: You must have Skinlink in order to take this echo. You have learned to encode layered folds of Matrix and Resonance information into physical objects in order to create physical data structures. This is useful for hiding a file in a form that only someone with this echo will be able to access, but you have also learned to create data structures that harmonize with and reinforce aspects of the Resonance. In short, this allows you to create and integrate items that benefit technomancers in much the same way magicians make use of foci.

Dissonant Scream: Dabbling in the Dissonance, are we? Taking this echo doesn't make you a Dissonant technomancer, but that distinction might not be clear to anyone who witnesses you using it. You are able to channel and scatter Resonance energy to create a raucous, disruptive wave that interferes with Matrix activity. To activate this echo, use a Major Action and make a Resonance + Submersion Grade test. For every hit, increase Matrix noise within 100 meters of your physical body by one. You are also affected by this noise. No forms of noise reduction have any effect on noise generated by this echo. At the end of every

combat round in which this echo is active, suffer fading with a Fade Value equal to the number of consecutive combat rounds it has been active. Your Overwatch Score increases by the number of hits scored on your Resonance + Submersion Grade test at the end of every combat round this echo is active. Deactivating this echo requires a Minor Action, but it deactivates automatically if you fall unconscious. After activating this echo, it may not be activated again until you have recovered from all fading damage. If you are observed using this echo by anyone outside your own team, add +1 to the Heat modifier at the end of the run.

Hybrid Sprites: When you compile a sprite, you can allocate net hits toward using this echo (instead of using those net hits to add more services). For each net hit you allocate in this way, you may provide the sprite with a skill or power that is normally only available to a different type of sprite that you know how to compile.

Living Command Console: You must have both Machine Mind and Living Network in order to take this echo. Your Living Network can also function as an RCC with an effective device rating equal to your Resonance attribute. You can only run and share autosofts that are running on your living persona.

Living Host: You must have Transcendent Network in order to take this echo. By spending some time in deep concentration, gathering and forming what might only be described as Resonance power, you can transform your living persona into an equivalent of a host. This requires an extended Tasking + Resonance test with a threshold equal to your Resonance attribute and an interval of one hour. Once complete, you become a living host within the Matrix. Only a technomancer, sprite, Resonance or Dissonance entity that scores one or more net hits on a Matrix Perception test will realize that you are not a true Matrix host. While this echo is active, you have a host rating equal to your Resonance attribute, and your Matrix attributes are the same as your

living persona. The number of devices that can be connected to you increases to your host rating x 10, and you gain all the benefits of your Transcendent Network echo. You are able to generate an effectively unlimited number of virtual spaces, though they all must be connected to each other in some way. Personas can access you just as they would a host, with your permission or by hacking in. You can store an effectively unlimited amount of data, but files uploaded to your living host are only accessible while you have this echo active.

You can change the appearance and architecture of your Living Host at will, even to mimic the appearance of any host you have visited. While this echo is active, you cannot be targeted by Matrix actions, complex forms, or sprite powers, except as a host. This means you are invulnerable to a wide variety of actions that can normally target a persona, such as Data Spike or Resonance Spike. You must maintain a state of deep concentration and remain in one physical place while sustaining this echo. If you suffer more boxes of Stun or Physical damage than your Willpower attribute from a single attack, or if you are physically moved from your location by more than one meter, your concentration is disrupted and your Living Host violently collapses. You take 6 boxes of Physical biofeedback damage and suffer dumpshock. All devices are disconnected, and anyone visiting the host in VR suffers dumpshock. If you wish to shut down your Living Host without suffering dumpshock, you must make an extended Tasking + Resonance test with a threshold equal to your host rating and an interval of a Major Action to do so. A critical glitch on this test causes dumpshock. You are not capable of running IC, but cheer up - you've got sprites! Because you are not a true host, you do not actually have a Foundation of your own. No one quite knows what would happen if someone found a door to the Foundation through a living host. Some believe that it might lead to a Resonance realm, but if anyone has tried to find out, they either failed or aren't talking about it.

Machine Mastermind: You must have the Machine Mind echo before you can take this echo. You gain the benefits of a rating 2 control rig. This echo is only selected once.

Mega-Sprite: You gain the ability to upgrade a registered sprite. This requires a special re-registration attempt. If successful, net hits do not provide additional services. Instead, you may use each net hit to either increase one of the sprite's Matrix attributes or provide the sprite with an additional sprite power that is normally only available to a different type of sprite. You can also upgrade an ally sprite or free sprite, with temporary results. When used on a free sprite or ally sprite, you require knowledge of their source code, and the effects last a number of hours equal to your Resonance attribute. When used on your own registered sprites, it lasts until the next time you attempt to re-register it.

Matrix Amplifier: If you spend a Major Action to activate this echo, you become a living conduit of Resonance that amplifies local Matrix connections. Your living persona and every device within 100 meters of your physical body gains a number of points of noise reduction equal to your submersion grade. This is incredibly taxing for you, though. At the end of every combat round, you suffer fading with a Fade Value equal to the number of consecutive combat rounds this echo has been active. Turning it back off again requires a Minor Action, but this happens automatically if you fall unconscious. This echo also alerts GOD. While this echo is active, your Overwatch Score increases by your submersion grade at the end of every combat round. After activating this echo, it may not be activated again until you have recovered from all fading damage.

New Sprite Type: You gain the ability to compile and register Assassin, Defender, Modular, and Primal sprites (see New Sprite Types , p. 72).

Resonance Power: You have learned something from the deep

Resonance that allows you to use a single sprite power. You must specify a sprite power when you take this echo, and it can't be changed. You may take this echo multiple times, and you must choose a different sprite power each time. Use your Resonance attribute in place of sprite level, where applicable. Immediately after using a sprite power, you must resist fading with a fade value equal to the number of hits you scored on the test to use the power. If no test is required to use the power, the Fade Value is 3.

Software Emulator: You must have Living Network in order to take this echo. You are capable of running commlink apps, cyberprograms, and autosofts on your living persona. You have

(Resonance/2) program slots. The maximum rating for any program you are capable of running is 6, and you are incapable of running an agent on your Living Network. Before you can emulate a program, you need to acquire a copy of it to absorb. Absorbing a program consumes it, causing its complete deletion. This takes an extended Electronics (Software) test with a threshold of 4 or the program's rating, whichever is higher (or applicable), and an interval of one hour. If the test fails, you can try again. A glitch adds 2 to the threshold, and a critical glitch causes both failure and deletion of the program. If you succeed, you may spend 1 Karma to absorb the code into yourself. After that, you can run it whenever you like. It can be crashed, but you can always reload it with a Minor Action. These programs can never be permanently deleted from your mind. There is no limit to how many programs you can 'learn' in this way.

Sprite Conduit: You are able to form deep bonds with sprites, and through these bonds you help register them into a more permanent form. You may permanently register sprites with great expenditures of time and Karma. When you do so, you may create either a free sprite or an ally sprite. The rules for this are in the following chapter, Points of Sprite

(p. 72). Add your submersion grade in bonus dice to your dice pool on all fading resistance tests from compiling and registering sprites.

Sprite Link: Your mind is more closely linked to your sprites, which allows them to more clearly understand your commands. When you spend a task and a Minor Action to command a sprite to assist you in a Teamwork test using one of its skills, you gain a bonus Minor Action. With a Minor Anytime Action and the use of one task, you may transfer fading damage that you would suffer to one of your sprites. You may attempt to resist fading first, then transfer as many boxes of unresisted damage as you choose. Your Sprite Rep goes down by 1 every time you do this.

Sprite Symbiosis: You must have the Sprite Conduit echo in order to take this echo. You may merge your ally sprite into your persona in order to boost your own power. See Points of Sprite , p. 79, for the full rules on this.

Syntax Error: You've learned the secrets of countering and unraveling complex forms and sprite powers. When you are aware of a Matrix action that targets any icon that you are also aware of, you may spend a Minor Anytime Action to provide the target with bonus dice on their defense test. The number of bonus dice is equal to your submersion grade. If you are aware of a complex form or sprite power that is being sustained, you may attempt to reduce or cancel it. Make an Electronics + Resonance test with bonus dice equal to your submersion grade vs. Logic + Resonance. Reduce the net hits from the complex form or sprite power by one per net hit if you succeed. If this reduces the net hits to zero or less, the sustained form or power ends immediately. This requires you to take a Major Action, and you suffer fading damage equal to the number of hits scored against you (total hits, not net hits) on the opposed test after each attempt.

Transcendent Network: You must have the Living Network echo in order to take this echo. When your living persona functions as the master device in a network, you act as an advanced conduit for data traveling through you, able to parse and process data at a supermetahuman rate. This allows anyone connected to your network to benefit from information sharing similar to the effect of an M-TOC device. In order to benefit from this echo, each person must connect their commlink (or other persona-generating device) to your living network. All connected individuals have access to a special pool of Edge that is equal to your submersion grade. This Edge pool is empty when established, but any connected character can transfer their Edge to it on a one-for-one basis at any time. When a point of Edge is earned by a connected character, it may be transferred to the transcendent network without counting against the maximum Edge that can be earned each round. Edge from the transcendent network may be used on any Edge boost or action that benefits any character that is connected. If you also have an M-TOC system, you can make full use of it along with the benefits of the transcendent network. They do not clash with one another. Another benefit of this echo is that connected characters who use the Send Message action (a Minor Action) among themselves gain a bonus Minor Action immediately afterward. This often gives users the impression that they have a telepathic link.

New Sprite Types

More variety has been observed among the denizens of the Matrix, and sprites are no exception. Some may believe that these are simply variants of known sprite types, but it seems much more likely that we will be seeing greater variety among sprites as more of them come into being. In order to compile or register any of these new sprite types, a technomancer must take the New Sprite Type echo.

Yuriko Star | echo_new_sprite_type | [Hack and Slash, Page 4]

New Echoes

Aura Link: You must have Skinlink in order to take this echo. You can wirelessly connect to devices as if using a direct connection, but only within a limited range. The range of your Aura Link is a radius from your physical body equal to your submersion grade in meters.

Cyberadept: You have begun to learn that your augmentations can be affected by your connection to the Resonance. Taking this echo unlocks the cyberadept quality path (p. 86).

Data Structure Encoding: You must have Skinlink in order to take this echo. You have learned to encode layered folds of Matrix and Resonance information into physical objects in order to create physical data structures. This is useful for hiding a file in a form that only someone with this echo will be able to access, but you have also learned to create data structures that harmonize with and reinforce aspects of the Resonance. In short, this allows you to create and integrate items that benefit technomancers in much the same way magicians make use of foci.

Dissonant Scream: Dabbling in the Dissonance, are we? Taking this echo doesn't make you a Dissonant technomancer, but that distinction might not be clear to anyone who witnesses you using it. You are able to channel and scatter Resonance energy to create a raucous, disruptive wave that interferes with Matrix activity. To activate this echo, use a Major Action and make a Resonance + Submersion Grade test. For every hit, increase Matrix noise within 100 meters of your physical body by one. You are also affected by this noise. No forms of noise reduction have any effect on noise generated by this echo. At the end of every

combat round in which this echo is active, suffer fading with a Fade Value equal to the number of consecutive combat rounds it has been active. Your Overwatch Score increases by the number of hits scored on your Resonance + Submersion Grade test at the end of every combat round this echo is active. Deactivating this echo requires a Minor Action, but it deactivates automatically if you fall unconscious. After activating this echo, it may not be activated again until you have recovered from all fading damage. If you are observed using this echo by anyone outside your own team, add +1 to the Heat modifier at the end of the run.

Hybrid Sprites: When you compile a sprite, you can allocate net hits toward using this echo (instead of using those net hits to add more services). For each net hit you allocate in this way, you may provide the sprite with a skill or power that is normally only available to a different type of sprite that you know how to compile.

Living Command Console: You must have both Machine Mind and Living Network in order to take this echo. Your Living Network can also function as an RCC with an effective device rating equal to your Resonance attribute. You can only run and share autosofts that are running on your living persona.

Living Host: You must have Transcendent Network in order to take this echo. By spending some time in deep concentration, gathering and forming what might only be described as Resonance power, you can transform your living persona into an equivalent of a host. This requires an extended Tasking + Resonance test with a threshold equal to your Resonance attribute and an interval of one hour. Once complete, you become a living host within the Matrix. Only a technomancer, sprite, Resonance or Dissonance entity that scores one or more net hits on a Matrix Perception test will realize that you are not a true Matrix host. While this echo is active, you have a host rating equal to your Resonance attribute, and your Matrix attributes are the same as your

living persona. The number of devices that can be connected to you increases to your host rating x 10, and you gain all the benefits of your Transcendent Network echo. You are able to generate an effectively unlimited number of virtual spaces, though they all must be connected to each other in some way. Personas can access you just as they would a host, with your permission or by hacking in. You can store an effectively unlimited amount of data, but files uploaded to your living host are only accessible while you have this echo active.

You can change the appearance and architecture of your Living Host at will, even to mimic the appearance of any host you have visited. While this echo is active, you cannot be targeted by Matrix actions, complex forms, or sprite powers, except as a host. This means you are invulnerable to a wide variety of actions that can normally target a persona, such as Data Spike or Resonance Spike. You must maintain a state of deep concentration and remain in one physical place while sustaining this echo. If you suffer more boxes of Stun or Physical damage than your Willpower attribute from a single attack, or if you are physically moved from your location by more than one meter, your concentration is disrupted and your Living Host violently collapses. You take 6 boxes of Physical biofeedback damage and suffer dumpshock. All devices are disconnected, and anyone visiting the host in VR suffers dumpshock. If you wish to shut down your Living Host without suffering dumpshock, you must make an extended Tasking + Resonance test with a threshold equal to your host rating and an interval of a Major Action to do so. A critical glitch on this test causes dumpshock. You are not capable of running IC, but cheer up - you've got sprites! Because you are not a true host, you do not actually have a Foundation of your own. No one quite knows what would happen if someone found a door to the Foundation through a living host. Some believe that it might lead to a Resonance realm, but if anyone has tried to find out, they either failed or aren't talking about it.

Machine Mastermind: You must have the Machine Mind echo before you can take this echo. You gain the benefits of a rating 2 control rig. This echo is only selected once.

Mega-Sprite: You gain the ability to upgrade a registered sprite. This requires a special re-registration attempt. If successful, net hits do not provide additional services. Instead, you may use each net hit to either increase one of the sprite's Matrix attributes or provide the sprite with an additional sprite power that is normally only available to a different type of sprite. You can also upgrade an ally sprite or free sprite, with temporary results. When used on a free sprite or ally sprite, you require knowledge of their source code, and the effects last a number of hours equal to your Resonance attribute. When used on your own registered sprites, it lasts until the next time you attempt to re-register it.

Matrix Amplifier: If you spend a Major Action to activate this echo, you become a living conduit of Resonance that amplifies local Matrix connections. Your living persona and every device within 100 meters of your physical body gains a number of points of noise reduction equal to your submersion grade. This is incredibly taxing for you, though. At the end of every combat round, you suffer fading with a Fade Value equal to the number of consecutive combat rounds this echo has been active. Turning it back off again requires a Minor Action, but this happens automatically if you fall unconscious. This echo also alerts GOD. While this echo is active, your Overwatch Score increases by your submersion grade at the end of every combat round. After activating this echo, it may not be activated again until you have recovered from all fading damage.

New Sprite Type: You gain the ability to compile and register Assassin, Defender, Modular, and Primal sprites (see New Sprite Types , p. 72).

Resonance Power: You have learned something from the deep

Resonance that allows you to use a single sprite power. You must specify a sprite power when you take this echo, and it can't be changed. You may take this echo multiple times, and you must choose a different sprite power each time. Use your Resonance attribute in place of sprite level, where applicable. Immediately after using a sprite power, you must resist fading with a fade value equal to the number of hits you scored on the test to use the power. If no test is required to use the power, the Fade Value is 3.

Software Emulator: You must have Living Network in order to take this echo. You are capable of running commlink apps, cyberprograms, and autosofts on your living persona. You have

(Resonance/2) program slots. The maximum rating for any program you are capable of running is 6, and you are incapable of running an agent on your Living Network. Before you can emulate a program, you need to acquire a copy of it to absorb. Absorbing a program consumes it, causing its complete deletion. This takes an extended Electronics (Software) test with a threshold of 4 or the program's rating, whichever is higher (or applicable), and an interval of one hour. If the test fails, you can try again. A glitch adds 2 to the threshold, and a critical glitch causes both failure and deletion of the program. If you succeed, you may spend 1 Karma to absorb the code into yourself. After that, you can run it whenever you like. It can be crashed, but you can always reload it with a Minor Action. These programs can never be permanently deleted from your mind. There is no limit to how many programs you can 'learn' in this way.

Sprite Conduit: You are able to form deep bonds with sprites, and through these bonds you help register them into a more permanent form. You may permanently register sprites with great expenditures of time and Karma. When you do so, you may create either a free sprite or an ally sprite. The rules for this are in the following chapter, Points of Sprite

(p. 72). Add your submersion grade in bonus dice to your dice pool on all fading resistance tests from compiling and registering sprites.

Sprite Link: Your mind is more closely linked to your sprites, which allows them to more clearly understand your commands. When you spend a task and a Minor Action to command a sprite to assist you in a Teamwork test using one of its skills, you gain a bonus Minor Action. You may attempt to resist fading first, then transfer as many boxes of unresisted damage as you choose. Your Sprite Rep goes down by 1 every time you do this.

Sprite Symbiosis: You must have the Sprite Conduit echo in order to take this echo. You may merge your ally sprite into your persona in order to boost your own power. See Points of Sprite , p. 79, for the full rules on this.

Syntax Error: You've learned the secrets of countering and unraveling complex forms and sprite powers. When you are aware of a Matrix action that targets any icon that you are also aware of, you may spend a Minor Anytime Action to provide the target with bonus dice on their defense test. The number of bonus dice is equal to your submersion grade. If you are aware of a complex form or sprite power that is being sustained, you may attempt to reduce or cancel it. Make an Electronics + Resonance test with bonus dice equal to your submersion grade vs. Logic + Resonance. Reduce the net hits from the complex form or sprite power by one per net hit if you succeed. If this reduces the net hits to zero or less, the sustained form or power ends immediately. This requires you to take a Major Action, and you suffer fading damage equal to the number of hits scored against you (total hits, not net hits) on the opposed test after each attempt.

Transcendent Network: You must have the Living Network echo in order to take this echo. When your living persona functions as the master device in a network, you act as an advanced conduit for data traveling through you, able to parse and process data at a supermetahuman rate. This allows anyone connected to your network to benefit from information sharing similar to the effect of an M-TOC device. In order to benefit from this echo, each person must connect their commlink (or other persona-generating device) to your living network. All connected individuals have access to a special pool of Edge that is equal to your submersion grade. This Edge pool is empty when established, but any connected character can transfer their Edge to it on a one-for-one basis at any time. When a point of Edge is earned by a connected character, it may be transferred to the transcendent network without counting against the maximum Edge that can be earned each round. Edge from the transcendent network may be used on any Edge boost or action that benefits any character that is connected. If you also have an M-TOC system, you can make full use of it along with the benefits of the transcendent network. They do not clash with one another. Another benefit of this echo is that connected characters who use the Send Message action (a Minor Action) among themselves gain a bonus Minor Action immediately afterward. This often gives users the impression that they have a telepathic link.

Sprite Symbiosis

A technomancer may choose to create a symbiotic bond with their ally sprite. This requires a positive sprite rep, an ally sprite, and the Sprite Symbiosis echo. To form a symbiotic bond, the ally sprite merges with the technomancer's living host. This requires a Minor Action from the technomancer and a Major Action from the sprite, and it provides the following benefits while sustained:

The technomancer's Matrix attributes are increased by the same amount that a sprite with the same type as your ally sprite adds to their level on its statblock. The technomancer gains (ally sprite's level/2) bonus dice on skill tests for which the sprite has a matching skill. This counts as a Teamwork test. The technomancer can use any of the ally sprite's powers, using their own skills and Resonance attribute for tests (with the Teamwork bonus dice mentioned above). If the technomancer takes Matrix damage, it is suffered by the ally sprite instead.

While using sprite symbiosis, the ally sprite is undetectable except to entities with a Resonance attribute. The only ways in which the ally sprite can be affected while in symbiosis is by damaging the technomancer's living persona.

The symbiosis ends if the technomancer falls unconscious, the ally sprite is crashed, or if the technomancer uses a major action to end it willingly. Extricating itself requires all of a sprite's attention, and it will not be able to act until the following combat round.

Hackers come at their work from a variety of angles and approaches. This chapter has qualities to help players define their hacks exactly the

way they want them to be.

Who's Who

Gerald 'GRAMIUS' Ramius

(Diplomat, Technomancer, Professional Rating 6)

First detailed in Whisper Nets , Gramius is on extended leave after surviving the Disian Shadow War. He's been tasked with escorting three technohounds, sometimes called 'mongrels,' from where he picked them up in the western Pueblo Corporate Council. He has been told they will be his guides and is expecting someone to meet him in Motor City. On a certain level, the E-dogs weird him out, but when around them, he feels more in

Active Skills: Athletics 4, Biotech 3, Cracking 6 (Hacking +3), Con 4, Electronics 6 (Complex Forms +3), Engineering 4, Firearms 4 (Rifles +2), Influence 5 (Etiquette +2), Outdoors 1 (Urban +2), Perception 6, Stealth 3 (Sneaking +2), Tasking 6 (Fault Sprites +2)

Knowledge Skills: Awakened Nations, Corporate Politics (Evo, Novatech, Wuxing), English (N), Japanese (S), Matrix Conspiracies, Russian (S), Small Unit Tactics, Street Knowledge (Boston, Manhattan, Seattle, Vladivostok) Qualities: Analytical Mind, Exceptional Attribute (Logic), Focused Concentration 2, Hold the Door, Impenetrable Defense, Photographic Memory, Sorcerer (technomancer stream)

Augmentations (betaware): Cybereyes 5 (w/ camera, cyberware scanner, flare compensation, Geiger counter, image link, low-light vision, smartlink, thermographic vision, vision enhancement, vision magnification)

Complex Forms: Arc Feedback, Bubble Shield, Cleaner, Cyberware Stamina, Data Bomb Eater, Data Disguise, Editor, Infusion (Firewall), Puppeteer, Resonance Channel, Resonance Spike, Smartgun Amplifier, Stitches, Technoregeneration, Unravel Encryption

Submersion and Echoes: Grade 5, Aura Link, Living Network, Overclocking, Skinlink, Transcendent Network

Gear: Armor jacket (DR +3, Electrochromic, Toughweave 1), Increase Reflexes tattoo quickening (included in stats), Registered Sprites (Courier L5, Data L5, Fault L6), SecureTech Invisi-Shield armor (DR +2, gear access)

Yuriko Star | echo_living_network | [Asphalt Jungles, Page 3]

Are there any modifications to Transcendent Network (p. 69) for SRM ?

This is modified for SRM to work like an M-TOC. The transcendent network no longer allows you to bypass the limit of 2 Edge gained per combat round. You can store Edge to the transcendent network using a Minor anytime action. Technomancers with this Echo can emulate Tac-Apps.

Yuriko Star | [echo_transcendent_network](#) | [Shadowrun Missions Guide v2.4, Page 69]

Attribute Overclocking

A method for temporarily increasing the effective value of one of the AI's basic attributes, Attribute Overclocking must be coded to one of the AI's attributes and only affects that attribute. Like attribute augmentations, the ASDF attributes are much easier to increase than Willpower, Logic, Intuition, or Charisma, and are both less expensive and less invasive. This codemod requires a Minor action to activate.

Once activated, roll (Attribute Overclocking rating x 2) dice. Each hit temporarily boosts the rating of the designated attribute by 1, up to the augmented maximum of +4. This only affects dice pools, so Initiative rank, Condition Monitor, Defense rating, and so forth is unchanged. The effect lasts for (net hits) combat rounds, and when it runs out, the AI must resist damage with Firewall + Willpower, equal to the attribute Boost gained. ASDF increases from an Attribute Overclocking codemod do not stack with ASDF increases from Resonance or Echoes.

Can I plug an agent box into a commlink or RCC to gain access to the full rating (p. 59-61)?

No. The agent running on a cyberdeck, host, or RCC is able to use the full rating of the agent. If it's running on any other device, the rating of the agent is reduced to the device rating / 2.

Can I use Autosofts on the Living Command Console Echo (p. 67 and 68) or the Aspect Peripheral from Machinist Stream (p. 131)?

To use Autosofts, you must use Software Emulator echo or Emulate Program complex form. The Living Command Console or Machinist Aspect Peripheral let a Technomancer share Autosofts, up to the Living Persona's Data Processing, to multiple drones similar to an RCC, but does not give them the ability to directly run Autosofts or Programs on your Living Persona. The Living Command Console or Machinist Aspect Peripheral grant noise reduction equal to the Technomancers Resonance attribute and Program Slots equal to their Living Persona's Data Processing attribute.

However, even without an RCC, Technomancer abilities like Software Emulator echo or the Emulate Program complex form DOES grant the ability to run Autosofts for the purpose of sharing one out to a single drone per Autosoft on your Living Persona's network, per the shadowrun FAQ.

Can I take the Cyberadept Echo (p. 67 and p. 86) given that quality paths from the Sixth World Companion are not Missions legal?

The Cyberadept Echo and the quality path for it is Missions legal with the

following modification: the highest-level quality in the path, Cyberadept Transcendent, is not legal. In addition, for Cyberadept Disciple, channeling resonance through augmentation is still limited to maximum rating of a type of device, so a control rig cannot be boosted past rating 3. If you are using a cyberjack, then you are not using your living persona and have lost access to the resonance pool, complex forms, and sprites.

Sprite-Technomancer Link

Sprites are connected to the technomancer who compiled them as long as that technomancer is connected to the Matrix. That connection can be used

to send words, images, video-whatever form of communication is needed is available. If the technomancer loses their connection to the Matrix, the sprite will go about the task they were given when the link was lost. If the sprite is unregistered, the time limit for their existence still applies.

rEvolution Arms Red Fox

I was impressed with the Wasp, but I am in love with the Fox. The extended barrel adds beam focusing that pushes the effective range past any other laser on the market. It still suffers from particulate disruption over distance, but rEvolution did something in the design to mitigate that. The look and feel are also awesome, with the same battery exchange style to give it a more classic rifle feel and a sharp design to fit its futuristic operation.

- > I watched a misfire once-the gun melted. They're built tough, but a hard jostle could put the emitters out of alignment, causing a myriad of issues, the worst of which is a catastrophic meltdown.
- > Stone
- > Actually, the worst is a catastrophic battery overload. Goes off like a grenade. Small damage radius, but enough to trash the gun, your hands, and your head if held at the shoulder.
- > Picador
- > Hip firing it is!
- > Stone
- > Really?! Think about that.
- > Picador
- > Oh.

- > Stone

Modifications: MAA Cyberarm Mount (+2 AR)

Tesla Coil

After Ares introduced the Scylla, it didn't take long for other weapons manufacturers to reverse-engineer their marvel of directed lightning. Although the term 'tesla coil' isn't strictly accurate, it's stuck as a brand-agnostic description of the cyber implant version of this weapon. A tesla coil projects electrical energy in a spray attack, much like a flamethrower. They prodigiously consume energy and require battery packs; the user's natural bioelectrical current is nowhere near sufficient to power this weapon. A tesla coil is not designed to moderate its consumption of battery charges. Once a battery is drained by a tesla coil, it cannot be recharged.

MONOFILAMENT WHIP

WEAPON

Category: Melee	Damage: 6P
Ap: 0	Attack Rating: 14 / - / - / - / -
Modes: SA	Ammo: -
Cost: 0	Avail: 6I
Source: core	Wireless On: True
Is Vehicle Mounted: True	

Modifications: Fingertip Cyberarm Mount (+2 AR), Wireless ON (+2 AR)

Monofilament Whip

Striking fear in the hearts of those who have warily watched its serpentine glow since the 2050s. In the hands of a trained user, this terrifying weapon can cut through armor, flesh, and bone as easy as butter with every millimeter of its two meters of monofilament line. In the wrong hands, or even with a bad twist of a skilled wrist, that line can send you to the street doc looking for a new limb. The whip is stored in the specially designed compartment in the handle with a small weight that detaches when the weapon is activated. Glitches are handled as usual, but a critical glitch always requires the wielder to resist the base damage of the weapon.

Securetech SkinShield

Obviously Ares got more from SecureTech (capital T) than just the PPP data. They also snagged some data on the ruthenium-enhanced SecondSkin line and have merged it all to make the SkinShield system, the next level of clandestine protection. The ruthenium system is upgraded to not just appear nearly invisible but also to alter skin tone for the perfect tan or ghostly pallor, add tattoos for that bit of edge, or, if you have a decent hacker, make you mostly transparent.

- > They are doing a lot of research and field testing with this set. It's quite a lucrative set of gigs if you're willing to offer up all your run data to the corp. What could go wrong?

- > Plan 9

SECURETECH INVISI-SHIELD ARMOR

ARMOR

Rating: 2

Primary: False

SecureTech Invisi-Shield Armor

Built as the successor of the ever-popular form-fitting body armor, SecureTech has revolutionized the concealable armor market with this line, which was something they needed desperately with Ares' theft of their PPP market share. While corpsec and military forces might want their armor to have some intimidation factor, executives and their protection specialists want no sign of their own personal fear while still being protected from whatever may come.

- > This is quality stuff. Protection without the guff and sideways glances.
- > Plan 10

Handling Off: 3	Accel On: 4
Accel Off: 4	Speed Interval On: 10
Handling: 3/3	Accel: 4/4

MCT Gnat

Tiny and slow, but indistinguishable from an insect without a microscope or vision mag, the Gnat is often used in MCT's Zero Zones, where a swarm of them all carry DMSO/Narcoject minislaps on their feet, then land en masse on a target. They're sold in packs of 10.

Yuriko Star | veh_mctgnat | [City Edition: Hong Kong, Page 247]

SHIAWASE BUTLER

VEHICLE

Body: 6 (Inhabited: 7)	Armor: 8
Pilot: 2 (Override: 9)	Sensor: 7
Speed: 8 (Rotor: 120)	Handling On: 4
Handling Off: 5	Accel On: 5
Accel Off: 5	Speed Interval On: 5
Handling: 4/5 (Rotor: 5)	Accel: 5/5 (Rotor: 10)

Modifications: Increased Structural Integrity 2, Secondary Propulsion (Rotor), Increased Sensors 3, Retractable Skates, Satellite Link

Shia w ase Bi-Drone Butler

(medium anthro drone)

The idea of robots and androids being servants to help make life easier for the everyday person has been a popular trope in science-fiction for well over a century now. Early attempts at such robotic servants were not only extremely clunky and primitive, but also extremely limited in their functionality. With the advent of state-of-the-art software, autosofts, and VR/AR controls, however, Shiawase has developed a series of anthroform drones that allow the average person to have that robotic servant they've always wanted. Known as the Butler, this medium-sized anthrodrone has special software that allows it to perform a wide variety of simple tasks. And like any other drone, it can be remotely operated. Also like any drone, the Butler is not a thinking machine. It only performs tasks it has been ordered to do, and once they are complete, the Butler will simply wait until another command is given. While adequate for everyday tasks, the Butler is slow and has no armor, making it relatively ill-suited for anything combat related.

- > And yet, there will be those who will try, just because.
- > Slamm-0!
- > A servant for everyone? Not at that prize. This is just another rich person's toy.
- > Old Crow
- > I got one, named Jimmy III. I don't use him as a butler, but he makes a great assistant in my garage holding and retrieving tools, making light repairs, that sort of thing. And I wouldn't say he's got zero combat ability. Like his forbearers, Jimmy I and II, he has a claymore mine strapped to his chest. Jimmy I and II helped me stay one step ahead of a roach that got into my place.
- > Johnny Redline
- > I've also heard that Shiawase is trying to court Als, and they made these drones with the specific intent of being inhabited.
- > Clockwork
- > Hey, stay in your lane! Batdrek theories are my department!
- > Plan 9

FEDERATED-BOEING SKY COMMANDER (SEATTLE RETRANS RELAY)

VEHICLE

Body: 3 (Inhabited: 4)	Armor: 4
Pilot: 3 (Override: 9)	Sensor: 7
Speed: 120	Handling On: 4
Handling Off: 4	Accel On: 10
Accel Off: 10	Speed Interval On: 20
Handling: 4/4	Accel: 10/10

Modifications: Retrans Unit, Satellite Link, RAM Plating 4, Enhanced Sensors 3, ECM 6, Integrated Matrix Device Dock, M-TOC II Repository & Software Tags, Rating 2 Framework Host Repository (Scale 1 Micro, Grade 2 Default)

Federated-Boeing Sky Commander

(small observ ation drone)

Although technically classified as an observation drone, the Sky Commander is often modified for use in military operations-either as a forward command/control drone or as an electronic warfare platform. The Sky Commander's basic shape is that of the old 'flying wing' aircraft of the late twentieth and early twenty-first centuries. The wings use variable geometry that can extend for greater lift, giving it increased ability to loiter over an area of operation and conserve fuel or battery reserves. In case of emergency, the wings can fold back, giving the drone greater speed and maneuverability. The entire chassis is completely smooth, greatly increasing its stealth profile. All sensor and imaging arrays, antenna, receiver/transceivers, and engine intakes are completely integrated into the drone's airframe. What makes the Sky Commander one of the best observation units in service are its powerful sensors and imaging

systems. Even at high altitude, there isn't much the Sky Commander can't see. Coupled with sat-link and retrans units as standard, it keeps field commanders up to date as events happen and can extend the range of forward-operating drones both in the air and on the ground. In the electronic-warfare role, the Sky Commander features the new mil-spec SW11 'Static Wall' variable-power jamming system. This system has two modes: omni-directional and focused, which means it can set up a jamming bubble approximately 2 kilometers wide or focus its jamming array on a single target. The drawback to this is that almost every cubic centimeter of the drone is packed full of gear and operating systems. Even a glancing blow risks knocking out a vital system, and there is no room for any weapons, even for defense.

- > Yeah, you can mount external weapons just fine, but doing so makes the Commander lose all its stealth features. Sometimes, it's a risk you may need to take.

- > Clockwork

-

3,000¥

- > I'm a big fan of the jammer myself. Focus it on one target, and you all but blind whatever you're going after, electronically speaking. And best yet, you don't pollute the immediate area.

- > Turbo Bunny

- > Too bad that system isn't available anywhere else. Although maybe I could just set one on my deck or strap one on top of the mast of my cutter. Hmmm ...

- > Kane

- > Oh goodie, that gives people like me something to shoot at. And I don't need fancy electronics or optics to get the job done.

- > Balladeer

SHIAWASE MAN-AT-ARMS

VEHICLE

Body: 10 (Inhabited: 11)	Armor: 17
Pilot: 2 (Override: 9)	Sensor: 6
Speed: 10 (Rotor: 120)	Handling On: 3
Handling Off: 3	Accel On: 5
Accel Off: 5	Speed Interval On: 5
Handling: 3/3 (Rotor: 5)	Accel: 5/5 (Rotor: 10)

Modifications: Weapon Mount (Heavy), Pop-Out Concealment (Large), Armor Increase 5, Secondary Propulsion (Rotor), Increased Sensors 3, Retractable Skates, Satellite Link

What errata is there for the Cougar Weapons Armsman (p. 47)?

These represent two different weapons.

Weapon Avail Cost
